The goal of an iron condor is to profit from a relatively narrow range of price movement in the underlying asset.

How to Trade Iron Condors

To trade an iron condor, you will need to:

- Select an underlying asset that you believe will have limited price movement in the near term.

- Choose an expiration date that is far enough out to give the options time to decay in value.
- Select a strike price for the call options that is above the current price of the underlying asset.
- Select a strike price for the put options that is below the current price of the underlying asset.
- Sell two call options and two put options with the same expiration date and strike price.

How to Manage Iron Condors

Once you have traded an iron condor, you will need to manage it carefully to maximize your profit potential.

The following are some tips for managing iron condors:

- Monitor the price of the underlying asset closely.
- If the price of the underlying asset moves outside of your desired range, you may need to adjust your position.
- If the price of the underlying asset moves in your favor, you may want to take profits early to avoid a reversal.
- If the price of the underlying asset moves against you, you may want to hold onto your position in the hope that it will eventually rebound.

How to Avoid the Common Pitfalls

There are a number of common pitfalls that traders can fall into when trading iron condors.

The following are some tips for avoiding these pitfalls:

- Do not overtrade. Iron condors should be used as a small part of your overall trading strategy.
