The American Revolution (1765-1783)

The American Revolution was a period of armed conflict between Great Britain and the thirteen American colonies. The revolution began in 1765 with the passage of the Stamp Act, which imposed a tax on all printed materials in the colonies. The colonists protested this and other taxes, and in 1776 they declared independence from Great Britain.

The American Revolution was a long and bloody conflict, but in the end the colonists were victorious. The Treaty of Paris, signed in 1783, recognized the independence of the United States.

The Early Republic (1783-1815)

After the American Revolution, the United States entered a period of rapid growth and development. The new nation adopted the Constitution in 1789, and George Washington was elected as the first president.

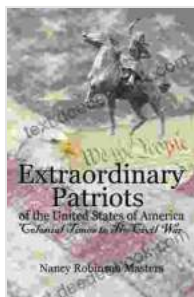

The early republic was a time of great political and economic change. The United States expanded its territory westward, and new states were added to the Union. The nation also developed a strong industrial base and became a major economic power.

The Antebellum Period (1815-1861)

The antebellum period was a time of increasing sectionalism in the United States. The North and the South had different economic and social systems, and these differences led to growing tensions between the two regions.

The issue of slavery was a major source of conflict during the antebellum period. The North was largely opposed to slavery, while the South was dependent on it for its economy. The debate over slavery eventually led to the outbreak of the Civil War in 1861.

The period from colonial times to the pre-Civil War was a time of great change and development for the United States. The thirteen original colonies grew into a powerful nation, and the country faced and overcame many challenges along the way. The legacy of this period continues to shape American history today.
